It is designed for creating simple drawings from scratch and for quick editing of drawings created using other CAD software. AutoCAD LT supports a variety of drawing types including architectural and civil engineering, mechanical, electrical, and plumbing, and architectural, landscape, and city planning. AutoCAD LT does not support any cutting and drilling operation. It is available as a full-featured commercial product, AutoCAD LT with CorelDRAW, or as a free software product, AutoCAD LT with limited functionality. Like the older AutoCAD version, AutoCAD LT operates in the raster graphics mode and creates drawings based on raster files. I'm curious to learn about non-Euclidean geometry, with a focus on curved spaces. The closest thing I've found so far is this list of popular geometries, which I've come across in the course of self-study. While it seems that most of these are in fact just Euclidean or spherical geometries, I was hoping to find a list of more exotic spaces that could appeal to a mathematics audience. Is there a list of more exotic geometries, with some kind of overview or description? If you have a recommendation for a physics textbook, that would be helpful as well. Thanks. A: I'd recommend this list of topological spaces. The description of each of these spaces is relatively brief. _New, BLASTER_Rate, BLASTER_Delay, BLASTER_TurnOn, BLASTER_TurnOff, BLASTER_Sens, BLASTER_Volume, BLASTER_SPLASH_Colour, BLASTER_SPLASH_Size, BLASTER_SPLASH_Pattern, BLASTER_SFX_Colour, BLASTER_SFX_Length
