Downloads: Learn More AutoCAD history AutoCAD has gone through several revisions over the years. Although many of the program's features have changed, the underlying algorithms have remained the same. The earliest version of AutoCAD was released in 1982 and was a horizontal 2D drafting program that ran on CP/M-86, MS-DOS, and IBM PC compatible computers. It was only possible to draw a drawing on a page by clicking and dragging the mouse over an area of the page. The first official release of AutoCAD was on December 6, 1982. It had a user interface and system requirements similar to Microsoft's MS-DOS version of Word for MS-DOS. The first AutoCAD program was a horizontal drafting program with limited command line tools that drew drawings in the same manner as the VisiCalc spreadsheet program. It was limited in the number of drawing units that it could use. AutoCAD ran on a 40MB hard drive with a maximum of 256Kb of RAM. AutoCAD supported only horizontal dimensions, or 2D drafting. AutoCAD had no direct functionality for creating, editing, or viewing graphical views of 3D or 4D design. It had no networking support and it could not import objects from a database or other files. AutoCAD 2 was released in 1984. It had a better user interface, tools for creating and editing basic parametric blocks, and limited 2D/3D CAD functionality. AutoCAD 2 had an extensive suite of tools for managing project and drawing data, including the ability to link individual drawings together. The AutoLISP programming language was used to support the drawing functionalities and control the overall program. It was available for MS-DOS, CP/M-86, IBM PC, Apple II, and IBM compatible computers. It could store up to 4,000 drawing units, and could work with drawings up to 800 feet (244 meters) long. Drawings could be organized and easily combined with images, text, and AutoLISP scripts. AutoCAD 2 supported a number of graphic primitives and functions, including the ability to create two-, three-, and four-sided splines, circles, ellipses, and polygons. The AutoCAD 2 software also introduced the concept of a parametric block (a square or rectangle with its sides, faces, and/or edges pre-defined) which became a major part of

While the drawing file format is well documented, there are fewer information on editing the design, in particular how to alter the network topology or optimize the drawing for performance. AutoCAD Web Content Server (AWCS) is a web application framework that can be used for extending AutoCAD. A minimum database for AutoCAD is a DWG file. Internet Protocol (IP) networking Autodesk IP networking is based on the open TCP/IP protocol and a number of vendor-specific protocols. Client and server A client is a computer program running on a machine that connects to the AutoCAD server, typically over a network. The AutoCAD client is configured to connect to the AutoCAD server on a particular port, usually port 3200. A server is a computer program that acts as an intermediary between one or more clients and the network. The AutoCAD server responds to client requests from the AutoCAD client. The AutoCAD server hosts one or more Autodesk servers. Autodesk servers host client plug-ins, but this is an optional configuration. Protocols AutoCAD supports a number of vendor-specific protocols for messaging between clients and the AutoCAD server. Notifications (autocadnotify) The Autocad notify system is a client/server based system for creating and sending alerts to application users. Notifications can be sent as email or instant message. A notification is a message which is displayed on the screen of the user who receives the notification. The message can have information about the problem which caused the notification to be sent, and the notification can be configured to be sent automatically or only be sent when a user wishes to be informed about a problem. Tool bars Autodesk has a system for integrating graphical toolbars, now commonly referred to as "toolbars". The toolbars are similar in concept to those found in applications such as Word or Excel. They are movable and the user can have more than one toolbar present. Toolbars are created using a text editor and put into the AutoCAD application database. Actions In AutoCAD 2010, the term "actions" has been replaced by "dialogs" and "workflows". A dialog is a type of block which appears in the drawing window, and is used to request specific information from the user, to assist in editing a feature. For example, a dialog box a1d647c40b

The Lakers rookie, already a fan favorite for his uncanny dunks and high-flying acrobatics, spent the night on the road to victory, pestering the Denver Nuggets, a team that had been out of playoff contention for much of the season. Bynum spent much of the game playing pick-up basketball with teammates, swatting at imaginary balls in the lane, before a 28-point, 10-rebound performance that included a half-court alley-oop from teammate Lamar Odom. ESPN.com's Len Baer reports: "And did I mention it was Kobe? He was impossible to miss and had more hustle than any of his teammates." "The next day, Bynum would admit to reporters that he had been up all night playing video games, but it was the real deal." "And, oh yeah, it was Kobe." "Kobe Bryant really did it," said Bynum's mother, Yolanda, who still blinks when she thinks about it. "That was his best game of the season." "And Kobe Bryant? Forget about him." Bynum, who hails from the Bahamas, is a big shot blocker who excels on the boards. But he has been gaining a reputation for his play on the offensive end, where he has a knack for using his big hands to draw contact and his combination of deft feet and soft hands to get the ball down low. This offseason, Bynum was given the title of "Mr. Dunk," but after two years on the road, it's time for him to settle in a permanent location. The Lakers will have to hope that Bynum can build on his performance tonight in order to increase his fan-base, while still preserving the team's annual infamy, which usually comes at the hands of the Los Angeles Kings. "The question remains: Can Bynum be the best player on this team? Kobe Bryant is in the league, and no one ever thought he'd be a good player," said the Lakers' official blog, The Lakers Stuff. "Nobody on this team has been called "The Man." Now it's time for the rookie to prove that he can be a Laker for life." Lakers fans know what they want from this kid: he needs to be aggressive and he needs to give us dunks. He needs to be a good defender
