AutoCAD has also been ported to operating systems other than Windows such as macOS and Unix (including Linux). From a small niche product, AutoCAD has since become a staple of the architectural, construction, civil engineering, and mechanical design industries. It is one of the most popular desktop applications in the world, with over 130 million licenses in use as of December 2019.

Key Takeaways AutoCAD is a computer-aided design (CAD) application that can work on desktop computers and mobile devices. It can design for industry professionals. It can also work on a wide variety of operating systems. AutoCAD offers 3D modeling functionality, 2D drafting, and other features. It is developed and marketed by Autodesk. It comes in several editions. History of AutoCAD AutoCAD was first released in December 1982, and it has undergone many upgrades over the years. AutoCAD's commercial support has been available since 1985. AutoCAD's first major version was released in February 1986. Version 1.0 included graphics capabilities and multi-user capabilities, with the first multitasking option in AutoCAD. With each release of AutoCAD, the software has been ported to work on new operating systems. Its first port was to Microsoft Windows 3.1 in 1987, and version 3.1 was the first version available on a Macintosh. It then

became the first version of AutoCAD available for the IBM PC/XT personal computer in 1988. The first release of AutoCAD for the Intel-based PC was for Windows 95 in 1992. Today, AutoCAD has been ported to most major operating systems including Linux, Windows 7, Windows 10, macOS, iOS, and Android. What exactly did Lord Voldemort kill? Was there a specific reason or did he just kill a random person at that time? What did he kill that was so great that he was hunted by the Ministry? A: There are several things that Voldemort killed, and some of them have particular significance in his development. First: Tom Riddle was born on October 31, 1971. At this time, the most famous wizard in Britain was not Harry Potter. It was Salazar Slytherin. He was also born on 31 October, and he was not the first child of his parents, but the fourth. -- Wikipedia - Tom Riddle When Tom Riddle was

born, Voldemort was attending Hogwarts for the first time. The first time Slytherin and Hufflepuff were united. By all accounts, the two houses had always been allies, and the fact that Slytherin broke ranks and joined Hufflepuff was deeply symbolic of how they were changing the public's perception of Hogwarts in Britain at that time. The Houses of the Magical Congress are still symbolic of the two main factions within the Wizarding World. Second: The Killing Curse was introduced to the wizarding world during Harry Potter and the Chamber of Secrets (1998). It was the first time it was used and therefore it was highly significant. While the Killing Curse was not taught to any student at Hogwarts until the seventh book, Tom Riddle was. When a student is learning a magical skill, you would expect it to be taught slowly, and with various instances of trial and error. This would mean that Tom Riddle could not have been taught the skill of "Unforgivable Curses"

during his years at Hogwarts. However, because Voldemort developed the Killing Curse before he attended Hogwarts, it means he was capable of the skill before that time. As such, he was able to kill his victims before he started attending Hogwarts. It is unclear if the Killing Curse was taught at Hogwarts during the

Q: Remove class to entire contents of HTML Element I have a series of divs in a row that contain a few pictures each. I have a button that on click, it will add a class to the first div and then display images in that div. I want to remove that class from the div if it already has it and just display the images in that

div. Here is what I have so far, but I can't get it to work. $('.id').toggleClass('item'); $('#myButton').on('click', function () { $('.id').first().toggleClass('item'); }); A: .first() doesn't take an argument, if you want the first element from.id, you can use.eq(0) $('.id').eq(0).toggleClass('item'); If you want to use first(), you need to put the statement inside an anonymous function and then it can't find first() $('#myButton').on('click', function () { $('.id').eq(0).toggleClass('item'); });). Let n = 15 + w. Solve -n = -3*i - 8 for i. -2 Let m = 39 - 22. Let d = m - 15. Suppose -3*q + 16 = -2*p, -2*q + 2*p + d = -3*p. Solve q*o = -o for o. 0 Suppose 0 = -3*i - i. Suppose -4*o + 2*o = i. Suppose -5*b + 17 = 2*p, 5
