This post, and its companion article on tutorials, will show you how to do some of the more mundane

tasks that you do in Photoshop, and how to create some of the more interesting examples. Basic editing: like a paintbrush Selecting an Area and creating a new layer Create a new layer and fill it with black While it is not essential to learn the process of creating a new layer, knowing how to do so is important. You will find the process in any basic editor, but is especially important in Photoshop because a lot of your work starts on a new layer. Select the Brush tool (the round tool on the tool bar). Choose an icon that looks like a paintbrush with handles in black. Click on a blank area of your photograph and drag to create the layer. Now that you have created a new layer with an all-black fill, it is time to make the photograph look interesting. Drawing Over Layers While not a Photoshop Tutorial in itself, this is a good idea. Double click (Ctrl-click on Macs) on the new layer. Using the Basic or Airbrush tools, draw the outline of your subject. Now begin to fill that outline in black with the same brush. You can zoom in and out by holding the Shift key and pressing the Control key on your keyboard. Brush Tool Options Creating a New Layer Using Your Brush You might have to do a lot of clipping when working with your brush, but sometimes it's a necessary evil. With the Brush tool, create a new layer. Using the round brush, begin to select areas of your photograph to highlight. Using the Pencil tool (a cross-shaped brush), start to fill in the highlighted areas with black. You may not be able to see where you are clipping. (Don't worry, you'll be able to undo and re-edit.) Create a New Layer and Draw using a Soft Brush As a general rule, you should avoid using the Brush tool for anything but a soft "brush." Its soft edges and ability to bleed make it good for little more than light outlining. In the interest of being thorough, I will show this way of outlining a selection with the Brush tool. With the Brush tool, click on the icon that looks like a soft brush with handles in black, and

Q: Regular Expression for integer in javascript not behaving the way I expect I'm not familiar with RegEx, but I'm trying to use it to validate some input. I have the following: `var re = /^\d+$/;`
`if(re.test(frm.custName.value)){ showElement("ok"); } else { showElement("error"); }` Here, `custName` is a form control in a table, and it's of type `text`. I'd like to make sure that it can only have one digit of my desired format: "1-9". This code isn't behaving as I'd expect. It seems to be allowing any string at all, even spaces, to be entered. The `showElement()` function simply shows an alert. How can I correct the code? A: Why not use a regular expression? `function checkInputValidity(input) { var pattern = /^\d+$/; if (pattern.test(input)) { showElement("ok"); } else { showElement("error"); } }`
Here's a brief discussion about regexes vs. string matches: (Newser) - David Letterman got his 15 minutes of fame, but it was way more than that to Richard Milhous Nixon. As the Wall Street Journal reports, the president's \$100,000-a-year "modest" salary turned a New Yorker into a stalker, as this "obsessed" letter-writer sent him 14 letters, plus 250 postcards, notes, and mementos, including a fake rubber snake, a "joke" pillow, an eraser, and a slingshot. After a 1971 visit to a Columbia University frat party, the father of three demanded that his son Marlin be removed from the Ivy League institution, thanks to a mysterious phone call; Richard told the college he was a high-ranking government official. After Nixon won the 1972 election—by just 437,000 votes, the Journal reports—the stalker visited the president's office and continued to pester him. In 1976 he even brought
